

dynax-SEAM

brushable/seam sealer

Product Function

dynax-SEAM is a tough elastic easy brushing single pack seam sealing compound. Offering outstanding protection against corrosion of vulnerable seams, flange joint, lapped metal work. This tough compound is easy to apply and recreates the factory finish applied to modern vehicles and also updates the protection during car restoration to provide superior longevity for rebuilt vehicle chassis and bodywork.

How to Use

Ensure that surfaces are dry and free of any contamination, degrease thoroughly with panel-wipe or clean solvent such as xylene.

Apply seam sealer generously and evenly with a brush along the seam. Achieve a dry film thickness of 200 microns over thinnest point.

Drying time will vary with temperature, humidity and air movement but typically 6-10 minutes to surface dry and 8-10 hours to fully cure. Accepts a wide range of paint finishes once fully cured.

Always test at small scale your full chosen paint system in full before use.
