

micro-fine

ultra fine paint conditioner

Product Function

micro-fine contains micro particle abrasives for fine chemical and mechanical paint cleansing and conditioning of excellent condition paint work. The micro-sized particles are substantially smaller than other paint polishes and will not inflict swirls or cobweb like holograms to highly prepped paint. They allow for gently mechanical assistance to the chemical cleaners to remove organic and inorganic matter. micro-fine will impart a detergent-proof deep gloss film that will outperform more expensive paste waxes.

How to Use

Thoroughly wash vehicle with hot soapy water, only use salt-free automotive shampoos. Do not use wash and wax products. Dry vehicle using chamois leather, or synthetic equivalent such as a microfibre cloth.

micro-fine will refine paintwork in excellent condition, but if your paintwork is faded, feels rough or has not been polished for a long period it will be necessary to use paint clay, polish-cleanser or even a cutting compound. Once prepared in this way regular application of micro-fine will maintain a high-gloss finish without need for further use of abrasive polishes. Use of cleanser-fluid prior to application of micro-fine will dramatically boost the longevity of the buffed film.

Shake micro-fine well, using the app pad, work the product in small circular motions to deep-clean the vehicle's paint. Work in a cool shaded position. Allow product to haze before buffing with the microfibre cloth to a high-shine.
